

PRESS RELEASE

RO-KA-TECH from May 10-12, 2017, in Kassel

**Do you already have an appointment with
SCHWALM?**

Bad Hersfeld, March 14, 2017. You are cordially welcome, no matter whether it is at the indoor stand in Hall H10 / Stand CO1 or at outside area F10 / 01. While in the indoor area, Schwalm Robotic GmbH uses a model of a modular sewer renovation vehicle to give fair visitors an overview of the product range as well as the latest 2.0 in-house developments, such as the compact and functional crane and drum frame, parallel to this, in the outside area, Schwalm Kanalsanierung presents the practical applications of Schwalm products. Via live demos, fair visitors will be presented, among other things, the positioning of compression plugs and Hutliner® cap liners, as well as further possibilities for implementing the Schwalm Talpa FSR 1330 and 2060 robots.

PRESS RELEASE

“Due to the thoroughly positive response during RO-KA-TECH 2015, this year, we will once again be represented with two stand areas,” explains Martin Schwalm, owner. “It is through the presence of our service employees that customers have the chance to experience the products live, in use, and have specific questions on problem cases answered. With regard to our recently received General Building-Authority Approval for the Schwalm HutlinerPacker® sewer rehabilitation process, interested parties can receive valuable information on a rehabilitation process that sets new, high-quality standards. In particular, the approval gives customers clarity on the process, gives them security in its application, and protects them from defective workmanship. We are looking forward to the fair and, in particular, to meeting you. From our perspective, there is no better way to test the products and answer your questions on the technology and on on-site use in practical implementations.”

So, meet Schwalm in Kassel twice, in Hall H10 / Stand CO1 as well as outdoor area F10 / 01. At both stands, the Schwalm fair team is looking forward to your visit.

About SCHWALM

Systems for trenchless partial sewer rehabilitation

Schwalm Robotic GmbH manufactures robotic systems and special vehicles for trenchless sewer rehabilitation. The systems' areas of application include main line and house connection rehabilitation, video diagnostics to assess damages and image documentation. Robots, equipment and sewer rehab vehicles are proprietary developments of Schwalm and are protected by patents.
